Alta Sicuro Technology Limited 高密科技有限公司

www.altasicuro.com
www.velosti.com

Alta Sicuro Technology is a leading provider of next generation storage solutions. Unlike most competition, our secure storage solutions utilise our own silicon controllers, firmware, hardware and software, and are very robust, secure and flexible. Alta Sicuro Technology and Velosti Technology are affiliate companies. Alta Sicuro Technology provides turnkey secure storage solutions whereas Velosti Technology provides secure controllers.

Next Generation Secure SATA Device

Our product enables our enterprise clients to transform a simple SATA drive to become numerous independent secure drives, each encrypted by a different encryption key and encryption mode (e.g. AES-XTS-256, SM4-CBC-128). The system administrator can fully configure the access control, including how long a drive can be accessed (e.g. 3 months).

Apping Technology Limited

www.appingtechnology.com

We are a company with a simple mission at hand, which is to help every business to be able to digitise their business processes as much as possible. This will give them the advantage of scaling up their business model more easily, and at minimal cost. We are enabling small businesses to have the chance to use powerful and yet affordable ERP solutions with one objective, that is to help them scale up and grow!

Mobile App solutions for business

Apping Technology tailors technical solutions to suit our clients' unique business needs. We design software applications and mobile apps to match different business goals according to clients' vision and requirements. Our development services are in line with industry standards and market trends.

To achieve that, we take our clients' requirements and user experience seriously into account and use multi-platform product development tools and framework. All our software designs aim to integrate seamlessly into pre-existing CRM/ERP systems. Our onshore and offshore development team are experts in meeting tight deadlines, process and results driven with code quality standards. Our software development lifecycle model adheres to legal compliance standards and ensures business continuity and high performance for our clients.

Digital Transformation

D-Engraver Limited 誠鐫科技有限公司
www.d-engraver.com

D-Engraver is founded by HKUST Alumni and professor, in 2018. The core members of D-Engraver team all come from top universities around the world. We provide leading-edge blockchain and IOT applications to eliminate the crisis of trust in the information sharing process involving multiple parties. Our vision is to break through the information isolated and certification in business corporation by engraving the credentials and historical record of organizations, without any third parties involved. We have been granted several patents in blockchain algorithm and data encryption method. Our first product "Hashtag", which is a blockchain IoT based anti-counterfeiting object track-trace solution for asset tracking has been launched to the market and is currently being used in several R&D institutions and companies.

It is a blockchain based digital contract with signature. Through technologies such as digital authentication, reliable timestamp and blockchain, which are unchangeable and traceable, it ensures security and reliability when transmitting documents through different departments in remotely work situation. It can address the uncertainty of contract and signature authentication, validity and notarization of digital contract and data security problems. It can also increase work efficiency and reduce time cost by allowing users to complete online signing anytime and anywhere, as well as processing contract. The solution is completely complying with the law which also allows user to conduct legal proceedings easier based on electronic evidence stored on blockchain.
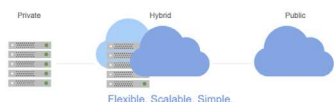

IBM China / Hong Kong Limited
www.ibm.com/hk

IBM is a cognitive solutions and cloud platform company headquartered in New York with operations in over 175 countries. The company creates value for clients by providing integrated solutions and products that leverage: data, information technology, deep expertise in industries and business processes, with trust and security and a broad ecosystem of partners and alliances. IBM solutions typically create value by enabling new capabilities for clients that transform their businesses and help them engage with their customers and employees in new ways. These solutions draw from an industry leading portfolio of consulting and IT implementation services, cloud, digital and cognitive offerings, and enterprise systems and software which are all bolstered by one of the world's leading research organizations.

IBM opened for business in Hong Kong in 1957, and has since been an essential partner to Hong Kong's growth and transformation. For more information, visit www.ibm.com/hk

IBM Cloud Object Storage is modern cloud storage architecture.

- Scales-up and scales-out architecture for extreme scalability
- Can be an on-premises and storage-as-a-service cloud solution
- Is a single, centralized and high-performance hybrid platform that can manage data for different departments and operations
- Supports flexible storage classes / tiers – such as active, cool and cold – fast recovery via a single API, and archiving capabilities to stay on top of their storage costs
- 99.99999999% always-on availability for vital resilience
- Encryption keys in addition to role-based policies keeps prying eyes away from sensitive data
- Geo-dispersed capabilities offered a vital advantage in backup and recovery, where in an event of a disaster or multiple failures, data could restore data from other active sites quickly
- Proven integration for solution supporting encrypted and convenient platform to communicate, share/send/receive documents at ease and enforce data / file storage policies.
