INTELLIGENT CONNECTIVITY

[www.AnywhereNetworks.com](http://www.AnywhereNetworks.com)

## Anywhere Networks

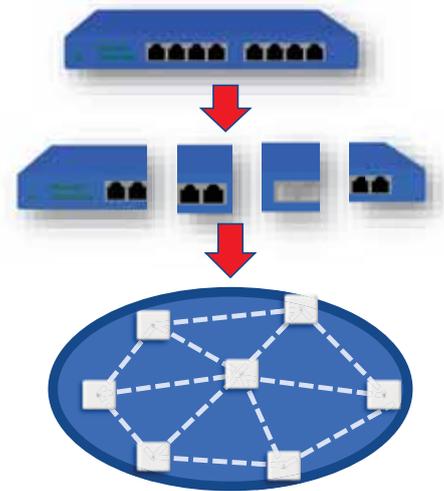

- Found and Headquartered in Hong Kong
- R&D and Regional office in San Francisco Bay Area and regional office in Guangzhou, China
- Intelligent networking solution and services for Smart City implementations (with immediate focus on SafeCity), transport and industrial applications
- Networks are deployed by global Tier-1 System Integrators and Mobile Operators in 19 countries

# Our Technologies & Products

We enable Fast & Cost Effective Deployment of Cameras and other Smart City solutions

- Ethernet Switch architecture – Full Ethernet standard compliance.
- Start with one physical location and seamlessly grow network to thousands of locations.
- Mesh topology, OoS, load balancing, low latency key to achieve reliable connectivity anywhere
- Wireless to extend reach and provide redundancy

# Sample Application & Success Stories

## Safe City

- Public security
- Traffic monitoring
- Crime prevention
- Municipality control
- Crowd control etc.

## Critical Infrastructure

- Railways
- Mass transit railways
- Terminus
- Piers
- Bridge etc.

## Safe Campus

- Real estates
- Container ports
- Universities
- Theme parks
- Plants and warehouses
- Extraction fields etc.

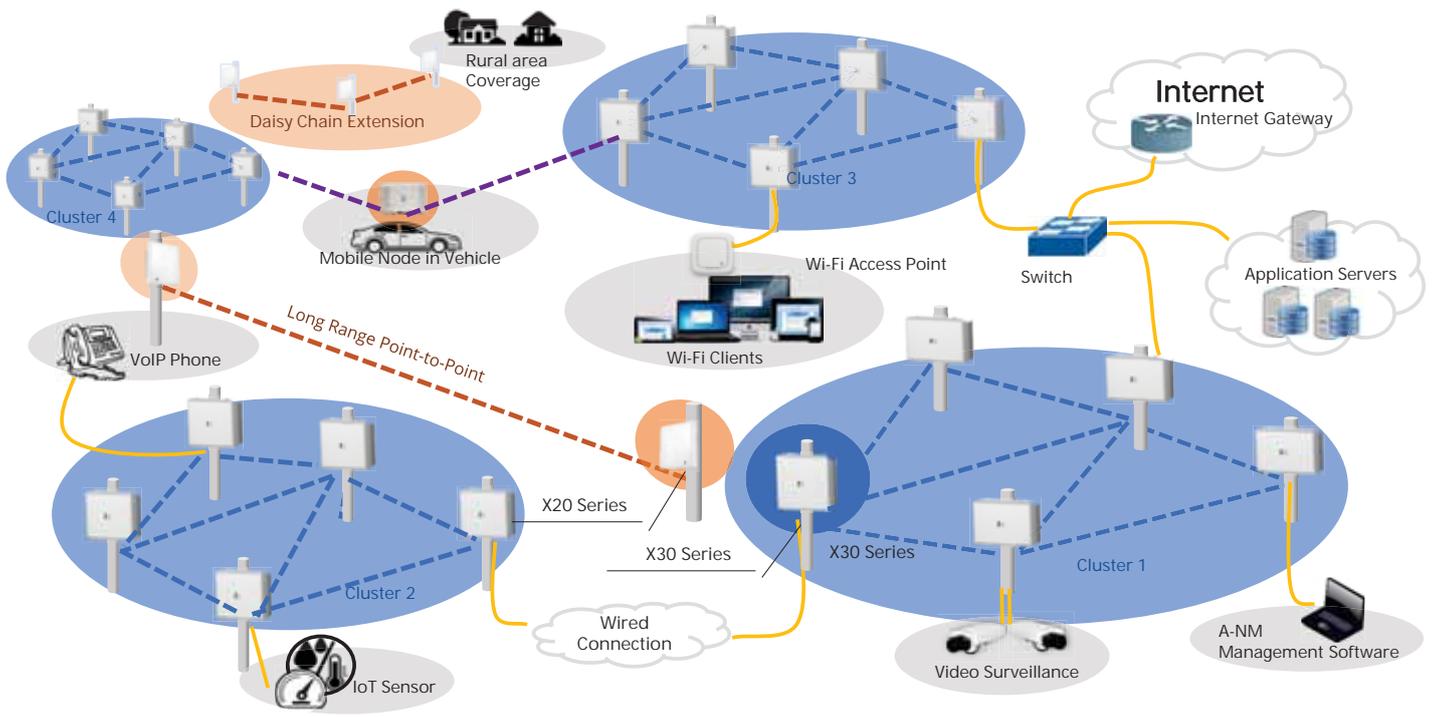

## Safe Event

- Exhibitions and events
- Bazaars
- Construction sites etc.

## Emergency Response

- Patrol vehicles
- Police
- Disaster victim identification etc.

INTELLIGENT CONNECTIVITY

# Case Studies

# Taiwan: Smart Lamp Pole System

## Application

Chunghwa Telecom together with the Taiwan government is deploying Smart Lamp Poles with IP cameras, Smart lighting system, sensors and digital signage in a 1.02 square km area as the connectivity backbone for their Smart City pilot and a precursor to a nationwide rollout.

## Challenges

- High throughput is required for live traffic monitoring and digital signage real-time push announcements
- Street lamps need to be everywhere and cabling and trenching is not an economically viable option

## Solution

- Anywhere Networks' wireless mesh solution
- Total of 620 units of X20 with 64 units deployed for the stage 1 of the project
- Mesh network provides connectivity to street lamps without 4G network coverage

## Result

- Impressive throughput and stable performance
- High flexibility for future expansion
- Resilient with redundancy and self-healing

# Deployment Topology

# Philippines: Smart City Project for Emerging Markets

## Application

Smart City wireless mesh for video surveillance, access control, flood monitoring, environmental protection, paging system, and traffic lights control in Cabanatuan City in the Philippines.

## Challenges

- High level of interference at platform area
- Difficult to expand existing surveillance network by laying cable

## Solution

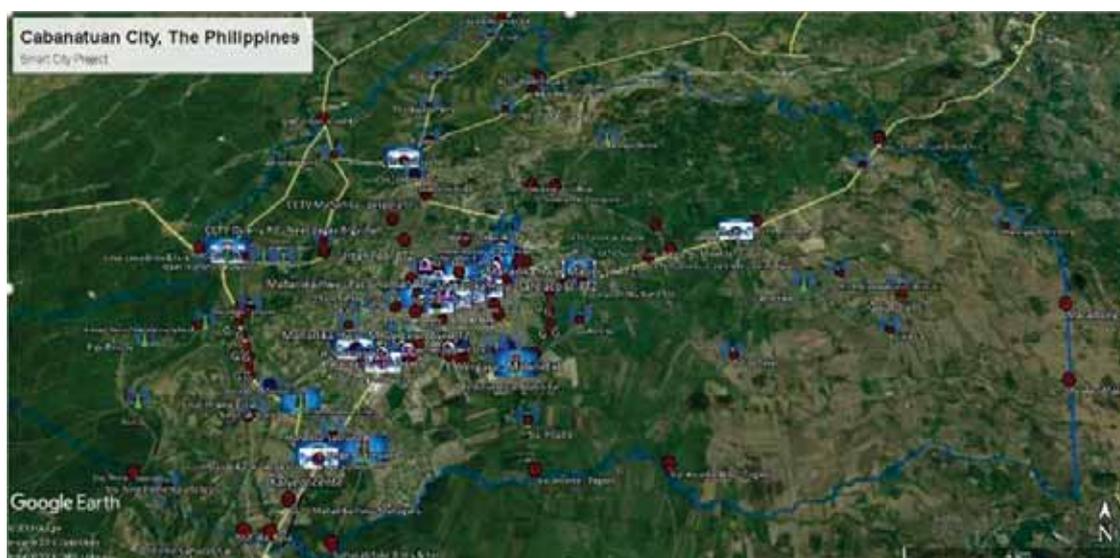

- Anywhere Networks' wireless mesh solution connecting 300 surveillance cameras, 8 flood monitoring equipment, 20 traffic lights, and 20 paging system.

## Result

- Replaced entire legacy analog surveillance network
- Robust and resilient network for the critical infrastructure
- No cabling required

## Project Design Overview
