mMTC: massive Machine Type Communication

# 5G OVERVIEW

## FR2 GLOBAL SPECTRUM ALLOCATION

- Assigned
- Planned
- Ongoing/Considered

Sources: 5G Spectrum Report – GSA (Feb. 2020)

## 5G CHALLENGE

- ▶ Building the 5G network before customer growth has challenges
  - Initially there is a tiny user traffic load that is un-evenly spread
- ▶ How do I learn if the planned and rolled-out network :
  - Meet requirements on Coverage and Quality?
  - Will run into problems when 5G gets mature and 5G customer traffic starts to grow?
- ▶ Solution is Drive Test!

# USE CASES

## USE CASES ANSWERING QUESTIONS

WORKSPACE OBJECTIVE, 5G-NR

### 5G-NR Coverage Analysis

- High level coverage situation analysis and visualization; focus on 5G-NR and LTE (NSA)
- Both Scanner and UE visualization
- Easy transition to drill-down options

### 5G-NR Benchmarking

- Dedicated 5G-NR, QoE and QoS Benchmarking complete visualizations
- Both Scanner and UE visualization
- Easy transition to drill-down options

### 5G-NR Troubleshooting

- 5G-NR troubleshooting and problem solving visualizations
- Both Scanner and UE visualization
- Easy transition to drill-down options

# SMARTANALYTICS ENTRY USE CASES

## 5G-NR Coverage Analysis

- What was the RF Coverage of each RAT; how good ?
- What was the RF Coverage of each Band; how good?
- 5G-NR Availability - Where is the LTE coverage with 5G enabled for Dual Connectivity?
- Best cell coverage - Where was each Cell providing the best RF Coverage, how good was the coverage, what was the cell isolation?
- Best SSB beam coverage - Where was each SSB beam providing the best RF Coverage, how good was the coverage, what was the SSB beam isolation?
- What was the average difference between LTE and 5G serving cell coverage (Master Cell vs Secondary cell)?
- Which UEs and Home Operators have been used?
- Where has the UE been connected to LTE only, to EN-DC LTE-5G and eventually legacy RATs?
- What is the RAT and Data Technology distribution?

# SMARTANALYTICS ENTRY USE CASES

## 5G-NR Benchmarking

- Campaign overview – Where and when do I have measurements? What type of tests? What RAT and Bands have been measured? What is the distribution per Operator?
- 5G-NR Coverage & Quality - What was the RF Coverage of each RAT; how good? What was the RF Coverage for each Band; how good? What was the interference/quality level? How do I compare with the other Operators? And regionally?
- 5G-NR Availability - Where is the LTE coverage with 5G enabled for Dual Connectivity? Comparison between Operators?
- Where (in which regions) am I worst in terms of 5G-NR coverage?
- 5G-NR Network Access – What is the success rate of 5G-NR (secondary cell group) cell activation? To what extent is LTE and 5G-NR Carrier Aggregation used? (secondary cell activation). What is the distribution of CA carriers? Per Operator?
- What is my Network Performance Score considering 5G-NR? How do I compare with the other Operators? And regionally?
- 5G-NR Mobility - What is the success rate of Master Node (MN) LTE handovers? What is the success rate of Secondary Node (SN) cell changes? Per Operator? And regionally?
- 5G-NR Physical Layer - What is the 5G Physical layer throughputs? What is the Modulation and Coding Scheme (MCS) per Operator? And regionally?

# SMARTANALYTICS ENTRY USE CASES

## 5G-NR Troubleshooting

- Coverage
  - Where are the 5G-NR Coverage problems? What are the worst areas? In terms of...high inter-cell interference?, high inter-cell SSB Beam interference?, Poor inter-cell Beam dominance?, Poor intra-cell SSB Beamforming gain?
  - What are the worst cells in terms of coverage?
  - What are the worst cells in terms of inter-cell interference?
  - What are the worst cells in terms of SINR?
  - What are the worst cells in terms of inter-cell SSB Beam interference?
  - What are the worst cells in terms of intra-cell SSB Beamforming gains?
  - Where are the No coverage areas?
  - Where and to what extent (duration) has the UE been connected to EN-DC enabled LTE cells without having 5G Secondary cells assigned?
- Network Access – Where do I have RACH Fail statistics?
- Mobility – Where do I have SCG Failures?

# NETWORK PLAN ANALYSIS

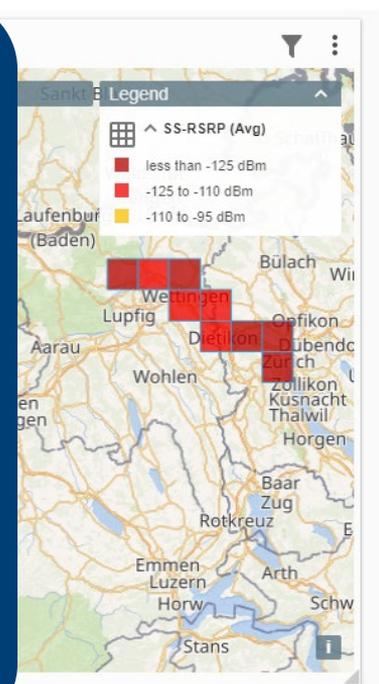

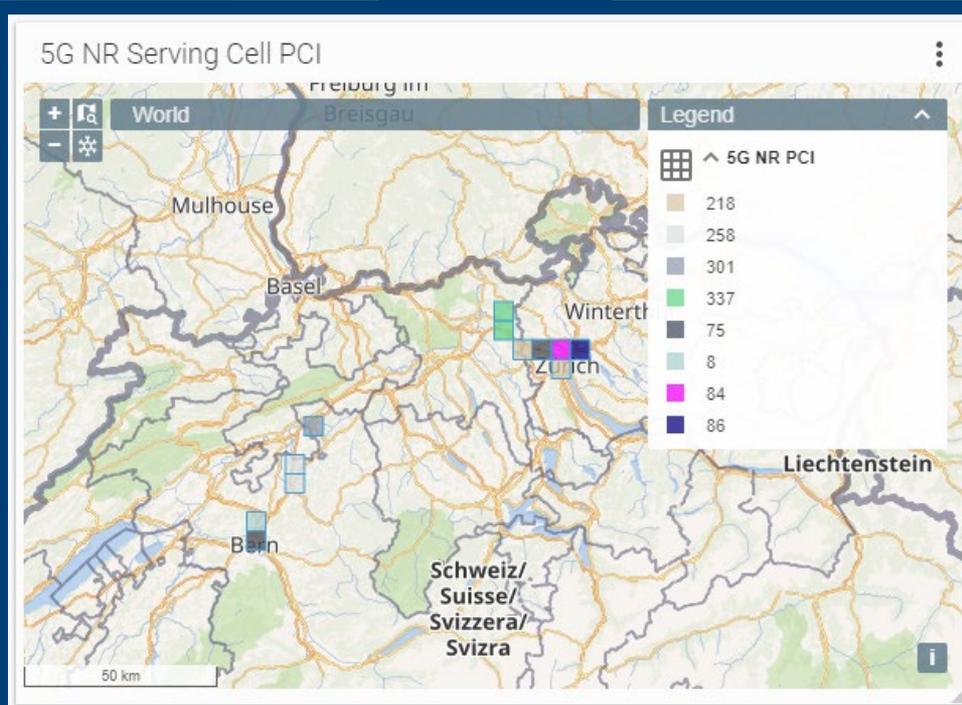

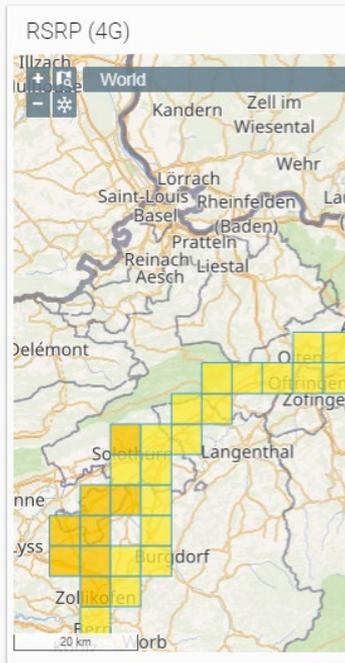

- ▶ R&S has introduced new Key Performance Indicators based on Geometry Factors to assess the quality and performance of unloaded 5G NR networks
- ▶ The GF KPIs are calculated on R&S®TSMx6 RF Scanner measurements
  - To ensure necessary 5G NR measurement speed, sensitivity and dynamic range
- ▶ Geometry Factor based KPIs are:
  - Inter cell based
    - Cell Geometry Factor (CGF) - Measure of Cell isolation / Inter-cell interference
      - For FR1 networks with Cell sector and single SSB index
    - Beam Geometry Factor Inter-Cell (BGF Inter) - Measure of Beam isolation between cells / Inter-cell beam interference
      - For FR1 and FR2 networks with SSB beamforming
  - Intra cell based
    - Beam Geometry Factor Intra-Cell (BGF Intra) – Measure of Beam forming gain vs Single sector

Mobile Network Testing

# UNATTENDED TESTING

# SERVICE QUALITY MONITORING MARKET TRENDS

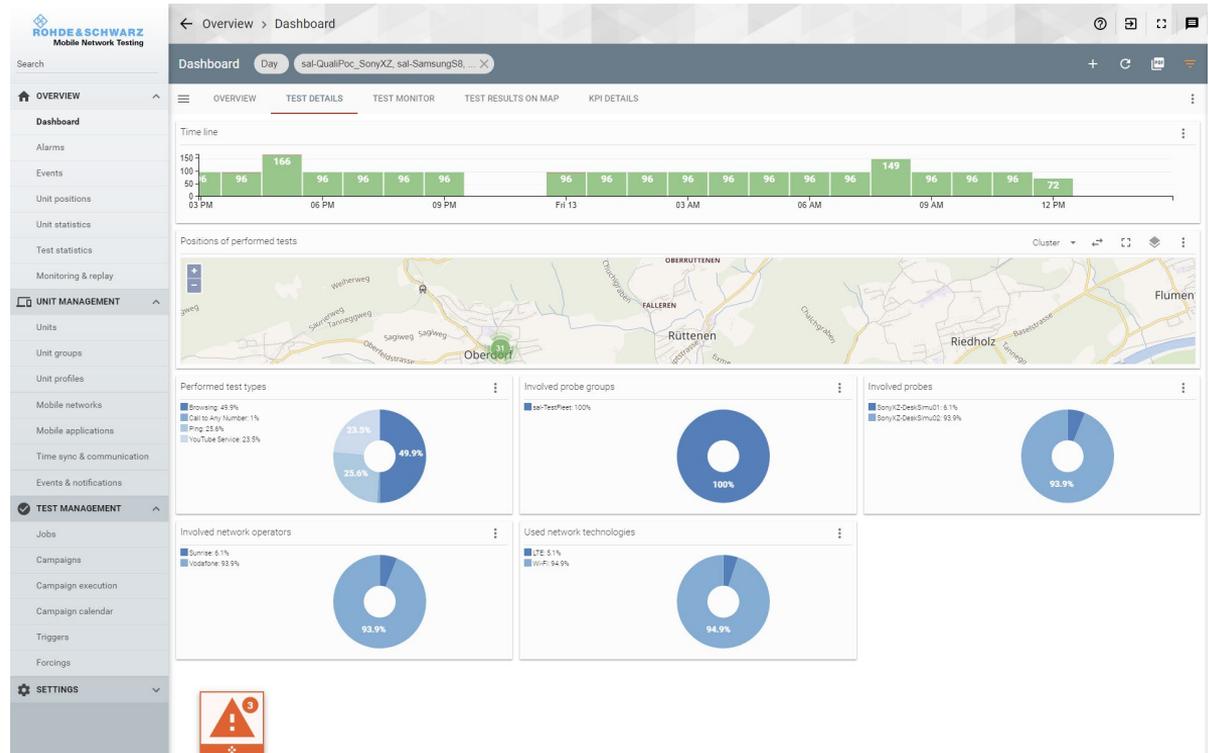

- ▶ More unattended drive tests, data collection and monitoring.
- ▶ Monitor and detect network service instabilities, errors or service drops in real time
- ▶ QoE based optimization
- ▶ The RAN is more dynamic (e.g. C-RAN) so also optimization must be more versatile and more real time.

# SMARTMONITOR FLEET MANAGEMENT & REAL TIME MONITORING

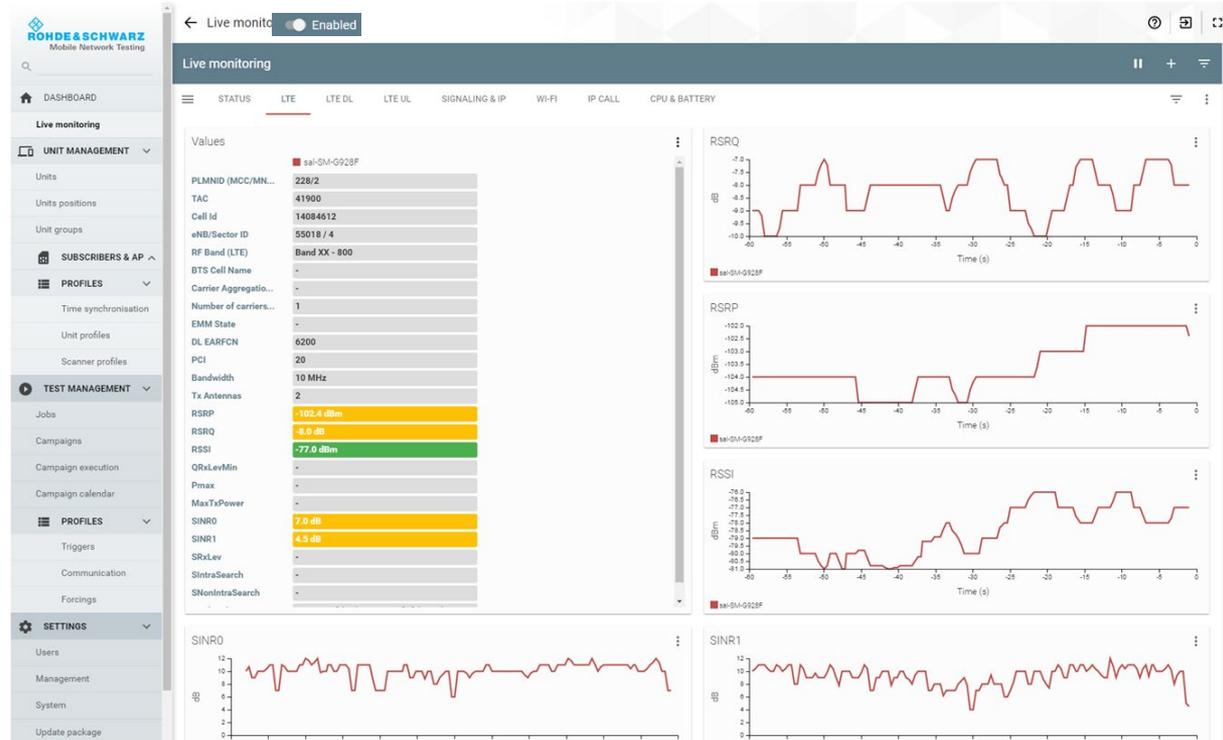

SmartMonitor is a web-based application for:

- ▶ **Managing** a fleet of QualiPoc Android Probes
- ▶ **Configuring** tests and campaigns
- ▶ **Monitoring** status of service quality in real time

# SMARTMONITOR LIVE MONITORING

Live Monitoring displays RF parameters and device information from the QualiPoc Android directly to SmartMonitor in real time

# QUALIPOC ANDROID PROBE SUPPORTING 5G NR

► QualiPoc monitors supporting 5G NR with all important parameters:

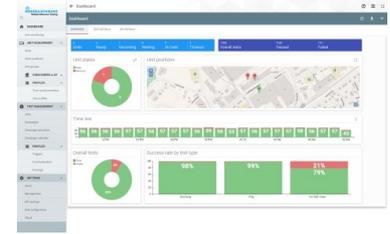

- 5G NR band
- SSB NR ARFCN
- SS-RSRP, SSRSRQ, SS-SINR
- PDSCH parameters
- PUSCH parameters

# SMARTMONITOR – CONCLUSION

## Real time monitoring

- ▶ Unattended, 24/7 service quality monitoring from end user perspective
- ▶ Dashboard shows test results and statistics in real time

## Easy and intuitive to operate

- ▶ Drag & drop job and campaign configuration
- ▶ Alarming interface
- ▶ Tailored roles and access rights
- ▶ Access SmartMonitor from everywhere

## QualiPoc Android Probe - Rich set of service tests

- ▶ Active, systematic data collection
- ▶ Voice quality incl. VoLTE and VoWi-Fi, data, video quality and app service tests (Dropbox, Facebook, WhatsApp IM & IP call, Ookla, etc.)
- ▶ Reliable operation due to watchdog & self recovering functions

Smart City

*The number of application and use cases will increase by folds in 5G.*

Good Performance and QOE

*Minimum amount of data rate*

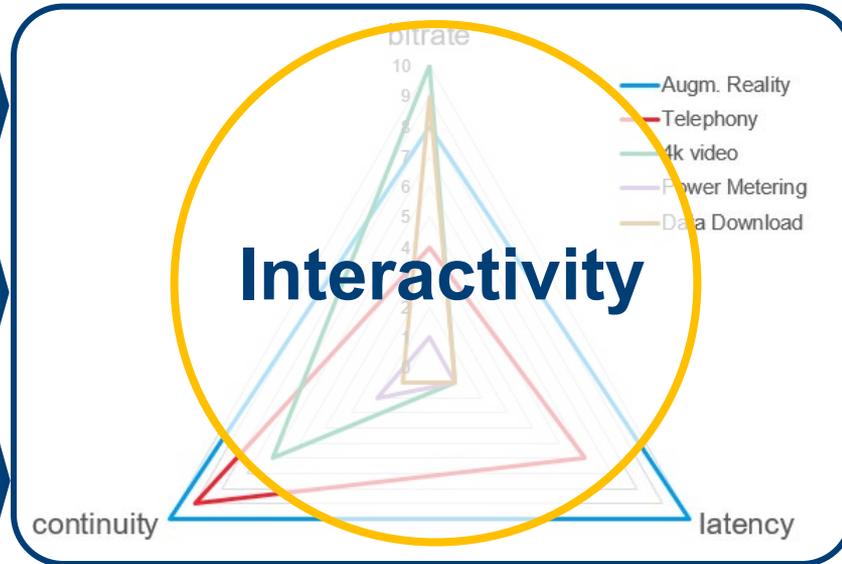

**CAPACITY**

*Minimum response time*

**LATENCY**

*Maximum length of interruptions*

**CONTINUITY**

# MEASURING QOS AND QOE OF 5G APPLICATIONS

## Interactivity

*More than Bitrate,  
Continuity and Latency are key*

### Continuity

*Interruptions*

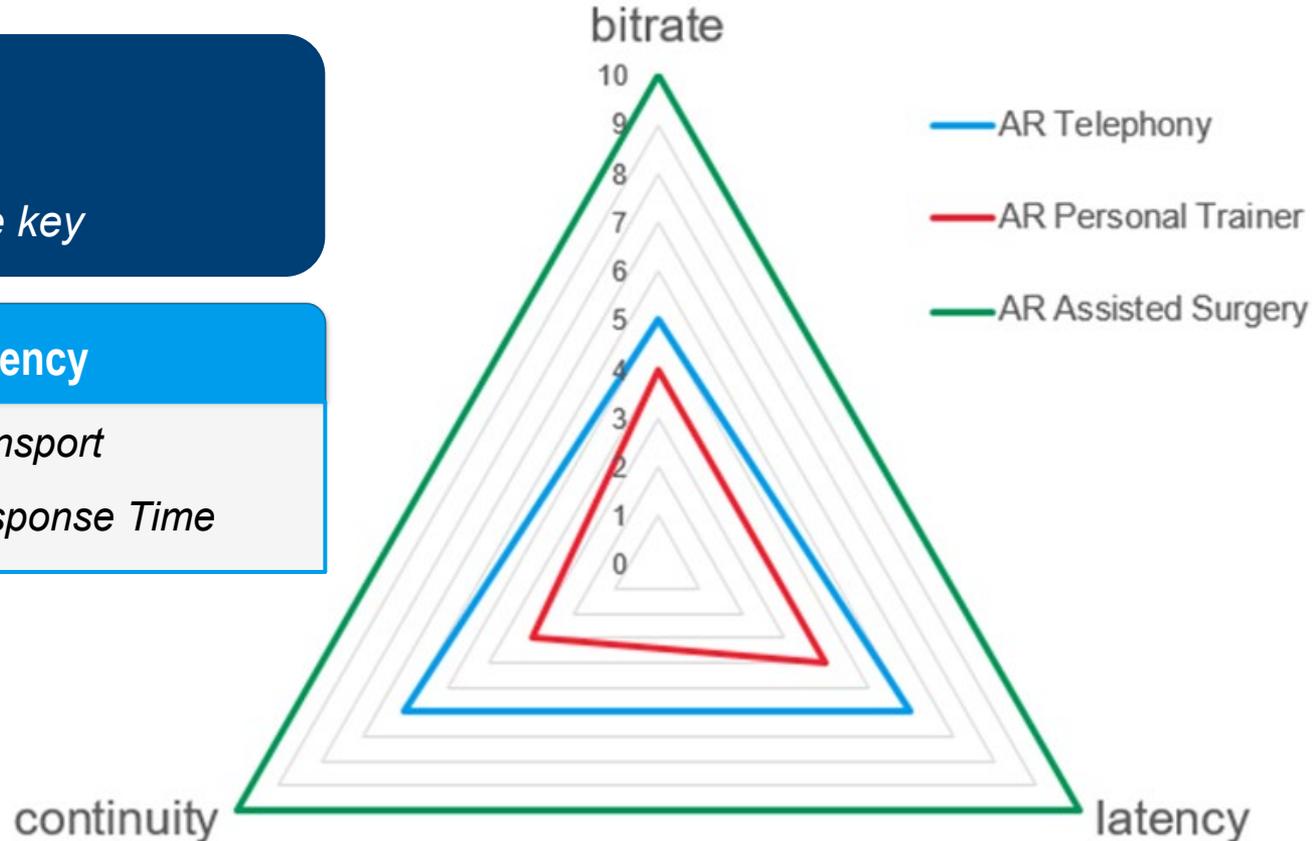

*Undercuts of  
required data rate*

*Indirectly packet loss*

### Latency

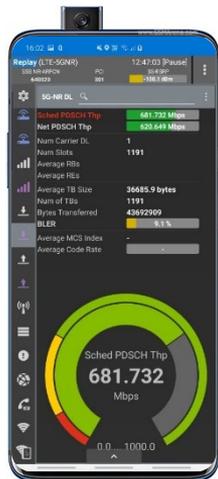

*Transport*

*Response Time*

# INTERACTIVITY TEST

**Measured**  
Latency (RTT)  
Jitter  
Packet Loss  
Corruption  
Ratio

**Frequency and size of packets controlled**

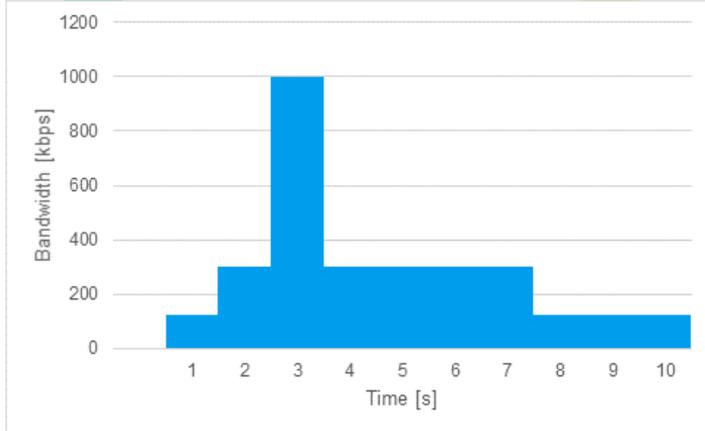

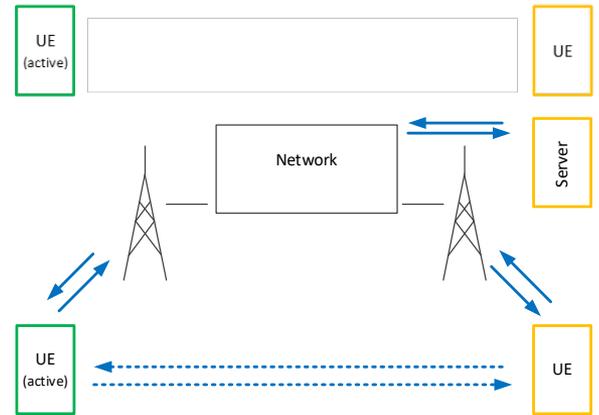

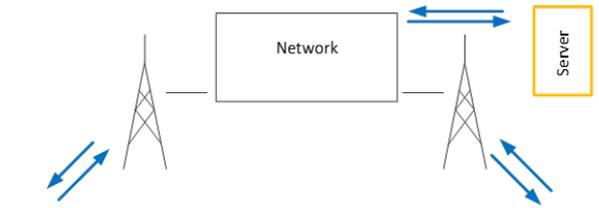

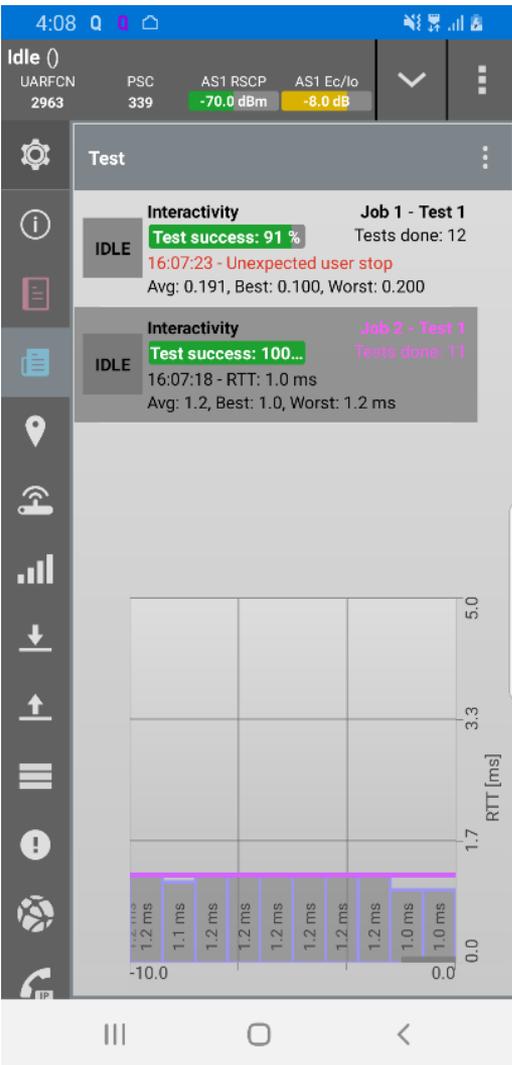

**Device sends unique packets to server**

**Server sends back packets as responses**

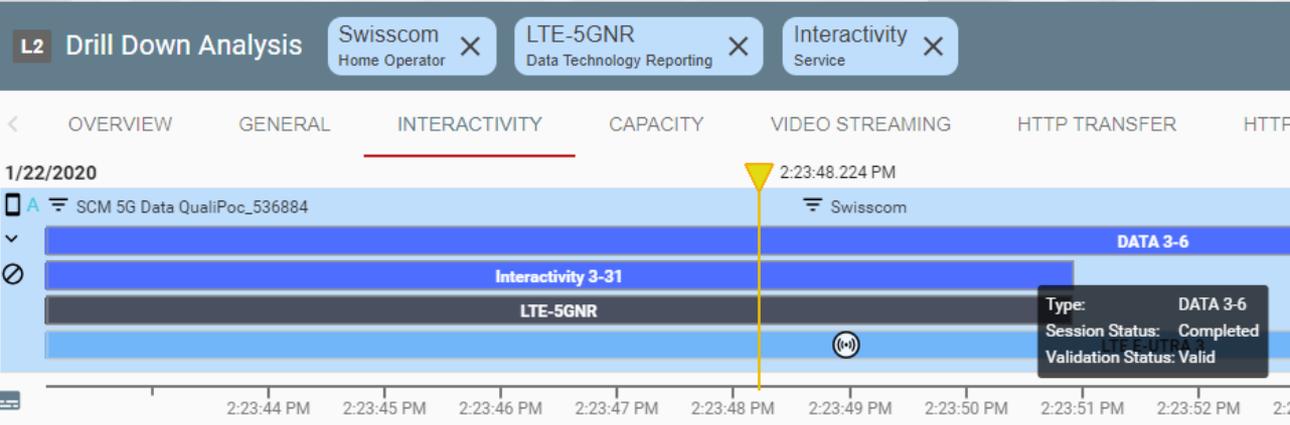

**Continuous Packet Flow**  
*Packet Rates of 100 to 1500 per second*

# CONTINUOUS EVOLUTION

- ▶ **INTERACTIVITY TEST**
- ▶ **Traffic Pattern to emulate applications**
  - Constant rate
  - eGaming real-time
- ▶ **Technical Results**
  - Latency
  - Packet Delay Variation
  - Packet Error Rate
  - Connectivity

Parameters
